

NJ SCI Pilot Survey

Students Grades 3-5 Data Report

Ocean Township Elementary School

June 2022

This report contains data from the New Jersey School Climate Improvement (NJ SCI) Survey. Items in the survey are organized into domains, or main conceptual areas of school climate. Means and response distributions are available for each domain as well as individual items within domains. Item level means represents the average score on an item for all respondents that answered that item. Item level distributions represent the number and percentage of respondents that selected each available response option (e.g., strongly disagree, disagree, agree, strongly agree) for an item. Total number of respondents in each item may vary if respondents skip (an) item(s) or select "Not Applicable." Overall means for each domain are calculated by taking the average of means from individual items within a respective domain. Similarly, overall response distributions are calculated by taking the average percentage distribution for individual items within a respective domain. Please note that mean scores on the domain and item-level pages are ranked highest to lowest.

** = Item includes a "not applicable" option and may have a lower response number compared to other items.*
